

IMPERIAL

STAND LEG INSTALLATION

Please follow the same procedure for units with the leg socket welded or bolted to the base of the unit.

Insert the leg tip/caster into the leg pipe. Loosen up the screws of the corner and the center shelf bracket and slide the stand legs in. Carefully tighten the screws to secure the leg in place.

CAUTION: do not over-flex the legs out of 90 degrees from shelf or you may damage the brackets.

The bottom shelf should be sitting 1" above the caster (that will leave a 6" gap between the floor and the bottom shelf).

Once you install the bottom shelf set the top shelf/unit and secure with the screws located in the leg socket.
